

CLAMPING VICE LC

ITEM: C6325

LC clamping equipment complete with wrench, rigid slide way, work stop, pair of positioning keys h6, cover for screw protection, 4 clamps. Supplied in cardboard box.

5-AXIS CLAMPING SYSTEM

ITEM: C6331

Genius is a clamping system engineered for 5-axis machining centers, thanks to its clamping repeat accuracy, it guarantees high-precision performances.

Genius clamping units **are provided complete with SinterGrip jaws**, the innovative clamping system with hard metal inserts, enabling the workpiece grip with only 3,5 mm clamping

This makes Genius the ideal system in case of 5-axis machining centers.

Its innovative shear clamping system provides a clamping force (up to 40kN) which is functionally directed on the clamped workpiece.

Locking can be performed in a single step, up to 200 mm.

Its jaws travel along cemented as well as rectified shafts, instead of surfaces, therefore enabling a faster and more accurate positioning on axis with the machine centre point.

Standard provided with 12x18 mm keys.
