

HEAT INSULATION JACKETS

INORMA								P	L	D		
D80.EN								Perimeter	Width	Diameter		
REQUIRED INFORMATION												
Quant.	D	L	P	a1	a2	a3	b1	b2	b3	c1	c2	c3

ADDITIONAL INFORMATION

P: Perimeter = External diameter of the heater (D) x 3.14

L: Insulating band width

a1 x b1: Heater cable outlet box, normally 50mm x 50mm.

Notes:

1. The thermocouple cables come out between the bands or holes have to be indicated at the sketch.
2. Dimension P (perimeter) must have a tight tolerance to ensure better fit to the machine cylinder.
3. Particularly suitable for insulating the cylinder of plastic injection molding machines.
4. Can support continuous temperature up to 650 °C.
5. Special manufacturing according to the application.
